### 1 Functions, identity, inverses and plots

- **1.** Let f(x) = 2x + 1. Find...
  - (a) Find f(f(x)).
  - (b) Find f(f(f(x))).
  - (c) Find f(f(f(f(x)))).
- **2.** Let  $f(x) = 3x^2 + 1$  and g(x) = 2x 3.
  - (a) Find f(g(x)).
  - (b) Find g(f(x)).

Are they the same?

- **3.** Let f(x) = ax + b.
  - (a) Find f(f(x)).
  - (b) Find f(f(f(x))).
- **4.** Let f(x) = ax + b and g(x) = cx + d.
  - (a) Find f(g(x)).
  - (b) Find g(f(x)).

Are they the same?

- **5.** Sketch y = x and y = -x. Put them on the same axes. Label everything.
- **6.** Sketch y = 2x and y = -2x. Put them on the same axes.
- 7. Sketch these lines on the same axes.

$$y=\frac{x}{2}, \quad y=-\frac{x}{2}.$$

- **8.** Make an exact plot of y = 3x + 2 by finding the *x*-intercept and *y*-intercept.
- 9. Make an exact plot of

$$y=-\frac{x}{2}-1.$$

1

- **10.** If f(x) and g(x) are linear, show that
  - (a) f(g(x)) is linear.
  - (b) g(f(x)) is linear.
- **11.** Let f(x) = 3x + 2. Find  $f^{-1}(x)$ . Do it two ways:

- (a) By  $f(f^{-1}(x)) = I(x)$ .
- (b) And by  $f^{-1}(f(x)) = I(x)$ .
- **12.** Let f(x) = ax + b. Find  $f^{-1}(x)$ . Do it two ways:
  - (a) By  $f(f^{-1}(x)) = I(x)$ .
  - (b) And by  $f^{-1}(f(x)) = I(x)$ .
- **13.** Let f(x) = 2x + 1. Find  $f^{-1}(x)$ . Make exact plots of f and  $f^{-1}$ . Also draw I.
- **14.** Let f(x) = -2x + 3. Find  $f^{-1}(x)$ . Make exact plots of f and  $f^{-1}$ . Also draw I.
- 15. Consider the function

$$f(x) = -\frac{x}{2} + 3.$$

Find  $f^{-1}(x)$ . Make exact plots of f and  $f^{-1}$ . Also draw I.

- **16.** Sketch the curve  $y = x^2$ . Use the unit square idea.
- **17.** Let  $f(x) = x^2$ . Sketch f, I and  $f^{-1}$  on the same axes.
- **18.** Let  $f(x) = x^2 + 1$ . Sketch f, I and  $f^{-1}$  on the same axes.
- **19.** Are there functions that are inverses of themselves? Does there exist any functions with the property  $f(x) = f^{-1}(x)$ ? In other words, f is its own inverse.
  - (a) Find one such self-inverse function f.
  - (b) Try to find more, as many as you can.

## 2 Introducing logarithms

- **20.** Draw the fastest-growing function f that you can imagine. Draw I(x) and use it to find the inverse  $f^{-1}$ .
- **21.** Draw the slowest-growing function f that you can imagine. Draw the identity I(x) and use it to find the inverse  $f^{-1}$ .
- **22.** Given f, tell me about the inverse  $f^{-1}$ . Does it grow fast, slowly, very fast etc.?
  - (a) f is a fast-growing function.
  - (b) *f* does not grow at all.
  - (c) f is a slow-growing function.
  - (d) f is a very slow-growing function.
  - (e) f is a very fast-growing function.
- **23.** Fill in this table about the behavior of  $f(x) = 2^x$  for different values of x.

$$x \qquad f(x)$$

$$x = 0 \qquad f = 1$$

$$x > 0$$

$$x < 0$$

$$x > 1$$

$$x \to \infty$$

$$x \to -\infty$$

- **24.** Plot  $2^x$ ,  $3^x$  and  $5^x$  all on the same axes.
- **25.** Consider the function  $f(n) = \left(1 + \frac{1}{n}\right)^n$ . Use a calculator. Fill in this table

x	f(x)
1	2
2	
5	
10	
100	
1000	

Notice how f(n) keeps increasing as n gets bigger. But also notice how f(n) does not increase to infinity, but approaces the magic number e from below.

**26.** Now consider the slightly different function  $g(n) = \left(1 + \frac{1}{n}\right)^{n+1}$ . Use a calculator. Fill in this table

x	$\int f(x)$
1	2
2	
5	
10	
100	
1000	

Notice how g(n) keeps decreasing as n gets bigger. But also notice how g(n) does not decrease to minus infinity, but approaces the magic number e from above.

- **27.** Plot  $2^x$ ,  $e^x$  and  $10^x$  all on the same axes.
- **28.** Plot  $f(x) = 2^x$  and the identity line I(x). Use the identity line to draw the inverse  $f^{-1}(x) = \log_2 x$ .

- **29.** Plot  $f(x) = 3^x$ , I(x) and  $f^{-1}(x) = \log_3 x$  all on the same axes.
- **30.** Fill in this table about the behavior of  $g(x) = \log_2 x$  for different values of x.

$$x \qquad g(x)$$

$$x = 1 \qquad g = 0$$

$$x > 1$$

$$x < 1$$

$$x = 2$$

$$x \to \infty$$

$$x \to 0$$

- **31.** Does  $2^x$  ever touch the *x*-axis? Does  $\log_2 x$  ever touch the *y*-axis?
- 32. Fill in the table.

$$\begin{array}{c|cccc}
x & 3^{x} & & x & \log_{3} x \\
1 & & 1 & & \\
2 & & 9 & & \\
3 & & 27 & & \\
4 & & 243 & & \\
5 & & 59049 & & \\
\end{array}$$

33. Fill in the table.

$$\begin{array}{c|cccc}
x & 10^x & & x & \log_{10} x \\
1 & & 1 & \\
2 & & 10 & \\
3 & & 1000 & \\
4 & & 100,000 & \\
5 & & 10,000,000 & \\
\end{array}$$

- **34.** Plot  $\log_2 x$ ,  $\log_3 x$  and  $\log_5 x$  all on the same axes. Label all the important points.
- **35.** Plot  $\log_2 x$ ,  $\log_e x$  and  $\log_{10} x$  all on the same axes. Label all the important points.
- **36.** The formulas relating f,  $f^{-1}$  and I establish the two most important properties of logarithms and exponentials. Use  $f(x) = a^x$  and  $f^{-1}(x) = \log_a x$  and tell me what these formulas imply:

(a) 
$$f(f^{-1}(x)) = I(x)$$
.

(b) 
$$f^{-1}(f(x)) = I(x)$$
.

Properties of  $\log_a$  5

## 3 Properties of $\log_a$

- **37.** Figure out  $a^{\log_a a^x}$ .
- **38.** Figure out  $\log_a a^{\log_a a^x}$ .
- **39.** Begin with the well-known property of exponential functions  $(a^x)^p = a^{xp}$  and prove the following property of logarithms:

$$\log_a u^p = p \log_a u.$$

Notice how log changes powers to multiplications.

**40.** Begin with something we all know:  $a^x a^y = a^{x+y}$  and prove the following property of logarithms:

$$\log_a uv = \log_a u + \log_a v.$$

Notice how log changes multiplication into addition.

41. Using an idea similar to the one in problem 40, prove that

$$\log_a uvw = \log_a u + \log_a v + \log_a w.$$

42. Use the results of problems 39 and 40 to prove this:

$$\log_a \frac{u}{v} = \log_a u - \log_a v.$$

Notice how log changes division into subtraction.

- 43. Use 39, 40 and 42 to figure these out.
  - (a)  $\log_2 8 \times 32 \times 64$ .
  - (b)  $\log_5 25 \times 125 \times 625$ .
  - (c)  $\log_2 2^7 8^5 16^3$ .
  - (d)  $\log_3 \sqrt{27} \sqrt[3]{81}$ .
  - (e)  $\log_5 \frac{\sqrt{125}}{\sqrt[3]{625}}$ .
  - (f)  $\log_e \frac{\sqrt{e}}{e^3} \sqrt[3]{e}$ .
- **44.** Use plots to explain why 0 < x < 1 when  $\log x$  is negative.
- **45.** Use plots to explain why  $\log x$  is positive when x > 1.
- **46.** Let x = a/b. Use the formula in **42** to show that  $\log x$  is negative when 0 < x < 1.
- **47.** Let x = a/b. Use the formula in **42** to show that  $\log x$  is positive when x > 1.

**48.** Positive or negative? Use log, algebra and plots to explain why. Assume the logarithm base is a > 1 as usual.

- (a)  $\log_a \frac{2}{3}$
- (b)  $\log_a \frac{5}{2}$
- (c)  $\log_a 0.8$
- (d)  $\log_a 1.8$
- (e)  $\log_a \frac{e}{\pi}$
- (f)  $\log_a \frac{\pi}{e}$

49. Positive or negative? Explain why.

- (a)  $\log \frac{\pi}{\sqrt{10}}$
- (b)  $\log \frac{\sqrt{10}}{\pi}$
- (c)  $\log \frac{3e}{2\pi}$
- (d)  $\log \frac{2\pi}{3e}$

**50.** Bigger or smaller than 1? Explain using logarithms, algebra and plots. properties of logs.

- (a)  $\left(\frac{3}{2}\right)^{2/3}$
- (b)  $\left(\frac{2}{3}\right)^{-3/2}$
- (c)  $\left(\frac{\pi}{5}\right)^{\sqrt{5/2}}$
- (d)  $\left(\frac{1}{\sqrt{3}}\right)^{-1/\sqrt{2}}$
- (e)  $(\sqrt{2})^{-\sqrt{2}}$
- (f)  $\left(\frac{1}{\pi}\right)^{1/e}$
- (g)  $(\sqrt{e})^{-\sqrt{\pi}}$

**51.** Given the inequality, determine which is bigger: x or y. Prove it using logarithms.

- (a)  $(0.5)^x > (0.5)^y$ .
- (b)  $(1.5)^x < (1.5)^y$ .
- (c)  $\left(\frac{3}{2}\right)^x > \left(\frac{3}{2}\right)^y$ .

- **52.** Which is bigger: *x* or *y*?
  - (a)  $(\frac{2}{3})^x < (\frac{2}{3})^y$ .
  - (b)  $\left(\frac{e}{\pi}\right)^x > \left(\frac{e}{pi}\right)^y$ .
  - (c)  $\left(\frac{\pi}{e}\right)^x < \left(\frac{\pi}{e}\right)^y$ .
- 53. Which is bigger? Explain using logarithms, plots, algebra etc.
  - (a)  $2^{70}$  or  $7^{20}$ ?
  - (b)  $5^{30}$  or  $3^{50}$ ?
  - (c)  $2^{50}$  or  $5^{20}$ ?
- **54.** Simplify.
  - (a)  $\frac{\log_2 81}{\log_2 27}$
  - (b)  $81^{\log_3 2}$
  - (c)  $64^{\log_4 3}$
  - (d)  $e^{\log_e(\log_e e^2)}$
  - (e)  $\left(\frac{1}{100}\right)^{\log_{10} 2}$
- 55. Prove that

$$\log_a b = \frac{1}{\log_h a}.$$

- **56.** Simplify.
  - (a)  $a^{1/\log_b a^2}$
  - (b)  $a^{1/\log_{b^2} a}$
  - (c)  $a^{1/\log_{b^6} a^3}$
  - (d)  $3^{1/\log_5 3}$
  - (e)  $3^{1/\log_5 3^2}$
- **57.** Simplify and explain what values of a and b are possible.
  - (a)  $\log(ab) \log|a|$ .
  - (b)  $\log(ab) \log|b|$ .
  - (c)  $\log(ab) \log|a| \log|b|$ .
- 58. Prove that

$$\log_{a^2} x = \frac{1}{2} \log_a x.$$

**59.** Prove that

$$\log_{a^p} x = \frac{1}{p} \log_a x.$$

**60.** Simplify.  $\log_a b^2 + \log_{a^2} b^4 + \cdots + \log_{a^n} b^{2n}$ .

- **61.** Simplify.  $(\log_a b)(\log_b c)(\log_c a)$ .
- **62.** Simplify.  $(\log_a b)(\log_b c)(\log_c d)(\log_d a)$ .
- **63.** Simplify.  $(\log_a b)(\log_{b^2} c^2)(\log_{c^3} a^3)$ .
- **64.** Simplify.  $(\log_a b)(\log_{b^2} c^2)(\log_{c^3} d^3)(\log_{d^4} a^4)$ .
- **65.** Simplify.  $(\log_a b^4)(\log_{b^2} c^3)(\log_{c^3} d^2)(\log_{d^4} a)$ .
- **66.** Simplify.  $(\log_7 2)(\log_3 5)(\log_5 7)(\log_2 3)$ .
- **67.** Simplify.  $(\log_5 3)(\log_4 5)(\log_{125} 8)$ .
- **68.** Simplify  $(\log_5 2)(\log_{27} 125)(\log_2 3)$ .
- **69.** Use  $\sqrt{\log_a b} \sqrt{\log_a b} = \log_a b$  and prove that

$$a^{\sqrt{\log_a b}} = b^{\sqrt{\log_b a}}.$$

For what values of *a* and *b* is this true?

**70.** Prove the famous change-of-base formula:

$$\log_a x = (\log_a b) \log_b x.$$

# 4 $\log_a$ with 0 < a < 1. What happens?
